

GIGA sample number:	SPF17-A371-hk
Order number:	171204NC
Customer batch n°:	17E01F09F26
Product description:	Umonium38 Neutralis Tissues
Date of reception:	07/12/2017

Assay system:

96 hours (D1 to D5) exposition of FVB x CD1 mouse embryo to M16. Embryos (test) have been collected and manipulated under laminar flow hood previously cleaned with the material « Umonium38 Neutralis Tissues » 17E01F09F26. Development was performed using standard culture methods, following the standard manipulating procedure PM-SPF-AN-001.05/En.

For a valid assay it is required that at least 80% of one-cell stage control and test embryos, developed to blastocyst stage within 96 hours.

Control assay materials and results:

21 one-cell FVB x CD1 mouse embryos were cultured in micro-drops of embryo-tested culture medium (M16):

21/21 (100%) one-cell to two-cells within 24 hours.

21/21 (100%) one-cell to expanded blastocysts within 96 hours.

Test assay materials and results:

21 one-cell FVB x CD1 embryos were cultured in micro-drops of embryo-tested culture medium (M16). Embryos have been collected and manipulated under laminar flow hood previously cleaned with the material « Umonium38 Neutralis Tissues » 17E01F09F26 for 96 hrs, from D1 to D5.

21/21 (100%) one-cell to two-cells within 24 hours.

21/21 (100%) one-cell to expanded blastocysts within 96 hours.

Comments on assay:

All test and control embryos were selected randomly from a common pool of freshly collected zygotes and were cultured in the same incubator at 37°C and 5% CO₂.

Conclusions

The « Umonium38 Neutralis Tissues » is **compatible** with mouse embryo development.
